Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (currently amended) An OLED device comprising a light-emitting layer containing a host and a dopant where the dopant comprises a boron compound containing a bis(azinyl)methene boron complex group wherein at least one of the azinyl groups has substituent groups joined to form a fused ring.

2. (Original) The device of claim 1 wherein the layer comprises a host and dopant where the dopant is present in an amount of up to 10 wt % of the host.

3. (Original) The device of claim 2 wherein the dopant is present in an amount of 0.1-5.0 wt % of the host.

4. (Original) The device of claim 1 wherein the boron complex group is a 6,6,6-tricyclic bis(azinyl)methene boron complex group.

5. (Original) The device of claim 4 wherein the boron complex group is a bis(pyridinyl)methene boron complex group.

6. (canceled)

7. (canceled)

8. (Original) The device of claim 1 wherein the host comprises a chelated oxinoid compound or an anthracene compound.

9. (Original) The device of claim 8 wherein the host comprises a chelated oxinoid compound.

10. (Original) The device of claim 8 wherein the host comprises an anthracene compound.

11. (Original) The device of claim 1 wherein the host comprises tris(8-quinolinolato)aluminum (III) or 2-*tert*-butyl-9,10-di-(2-naphthyl)anthracene.

12. (previously presented) The device of claim 1 wherein the substituents of the host and dopant are selected to provide an emitted light having a green hue.

13. (previously presented) The device of claim 1 wherein the substituents of the host and dopant are selected to provide a reduced loss of initial luminance compared to the device containing no boron compound of claim 1.

14. (currently amended) The device of claim 1 wherein the dopant compound is represented by Formula (1):

(1) 
wherein

A and A' represent independent azine ring systems corresponding to 6-membered aromatic ring systems containing at least one nitrogen;

each X^a and X^b is an independently selected substituent, two of which may join to form a fused ring to A or A' wherein at least one of ring A or A' contains substituents joined to form a fused ring;

m and n are independently 0 to 4 ;

Y is H or a substituent;

Z^a and Z^b are independently selected substituents; and

1, 2, 3, 4, 1', 2', 3', and **4'** are independently selected as either carbon or nitrogen atoms.

15. (Original) The device of claim 14 wherein **1, 2, 3, 4, 1', 2', 3',** and **4'** are all carbon atoms.

16. (canceled)

17. (Original) The device of claim 14 wherein both ring A and A' contain substituents joined to form a fused ring.

18. (previously presented) The device of claim 14 wherein there is present at least one X^a or X^b group selected from the group consisting of halide, alkyl, aryl, alkoxy, and aryloxy groups.

19. (previously presented) The device of claim 14 wherein Z^a and Z^b are independently selected from the group consisting of fluorine, alkyl, aryl, alkoxy and aryloxy groups.

20. (Original) The device of claim 19 wherein Z^a and Z^b are F.

21. (Original) The device of claim 14 wherein the layer comprises a host and dopant where the dopant is present in an amount of up to 10 wt % of the host.

22. (Original) The device of claim 21 wherein the dopant is present in an amount of 0.1-5.0 wt % of the host.

23. (currently amended) The device of claim 1 wherein the boron compound is selected from the following.

25. (Original) A light emitting device containing the OLED device of claim 1.

26. (Original) A method of emitting light comprising subjecting the device of claim 1 to an applied voltage.

27. (New) The device of claim 1 wherein the methene group is substituted with hydrogen, an alkyl group or an aryl group.

28. (New) The device of claim 14 wherein Y is hydrogen, an alkyl group or an aryl group.
